

Product Fact Sheet

QUIK Cleat

Dimensions: 7 1/2 " long X 8 " wide X 3 " deep

Material: 5/16 (8mm) cold rolled wire

Finish: Nickel Chrome / Bright Zinc Coated

Features

- One continuous piece of cold rolled steel that is shaped to provide strength and security when the **QUIK Cleat** is applied
(No welded parts like other cleats)
- Larger format size to ensure strength when inserted into the dock planks and visual to retrieve
- No moving parts eliminating wear and tear in adverse weather conditions
(other cleats have moving parts to increase risk of malfunction)
- Return bend of the wire outward below the loop to lock in **QUIK Cleat** between planks. This will reduce the lateral boat action and lock in loop handle (not all cleats have this feature)
- Wider base to ensure stress is spread out underneath the plank and doubling the wire shape to increase the amount of strength when watercrafts are pulling under adverse conditions
- Handle larger and shaped for ease of application and reduce the movement of the rope knot when applied
- Stress tested for watercrafts up to 8000lbs under normal conditions
(Recommended for watercrafts up to the length of 28' approx.)
